Attachment to a signed Office action.

Manual of Patent Examining Procedure (MPEP), Section 713.04, Substance of Interview Must be Made of Record

A complete written statement as to the substance of any face-to-face, video conference, or telephone interview with regard to an application must be made of record in the application whether or not an agreement with the examiner was reached at the interview.

Title 37 Code of Federal Regulations (CFR) § 1.133 Interviews Paragraph (b)

In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for reply to Office action as specified in §§ 1.111, 1.135. (35 U.S.C. 132)

37 CFR §1.2 Business to be transacted in writing.

All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete an Interview Summary Form for each interview held where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below. Where the substance of an interview is completely recorded in an Examiners Amendment, no separate Interview Summary Record is required.

The Interview Summary Form shall be given an appropriate Paper No., placed in the right hand portion of the file, and listed on the "Contents" section of the file wrapper. In a personal interview, a duplicate of the Form is given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephone or video-conference interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Application Number (Series Code and Serial Number)
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (telephonic, video-conference, or personal)
- Name of participant(s) (applicant, attorney or agent, examiner, other PTO personnel, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). Note: Agreement as to allowability is tentative and does not restrict further action by the examiner to the contrary.
- The signature of the examiner who conducted the interview (if Form is not an attachment to a signed Office action)

It is desirable that the examiner orally remind the applicant of his or her obligation to record the substance of the interview of each case. It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview.

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,
- 2) an identification of the claims discussed,
- 3) an identification of the specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the Examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner,
 - (The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he or she feels were or might be persuasive to the examiner.)
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete and accurate, the examiner will give the applicant an extendable one month time period to correct the record.

Examiner to Check for Accuracy

If the claims are allowable for other reasons of record, the examiner should send a letter setting forth the examiner's version of the statement attributed to him or her. If the record is complete and accurate, the examiner should place the indication, "Interview Record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

Claim 1 (Currently Amended): An information record apparatus for adjusting power of write light onto an optical information record medium, the information record apparatus comprising:

- a light source for emitting the write light having a predetermined power;
- a power adjustment section for adjusting the emission power of the write light;
- a write section for applying the write light emitted from the light source to record a record pit in the optical information record medium;
- a feature extraction section for optically reproducing a record state containing the record pit from the optical information record medium in which the record pit is recorded to produce a first signal waveform, the feature extraction section extracting feature information of the record state from based on the first signal waveform; and

a control section for controlling the power adjustment section to <u>adjust the emission</u>

<u>power of the write light</u> set a plurality of write light each having a different emission power

based on the feature information provided by the feature extraction section,

wherein after the write section applies write light having a specific power or a predetermined power to record a record pit in the optical information record medium:

the feature extraction section optically reproduces a record state containing the record
pit to produce a first signal waveform and extracts feature information of the record state based
on the first signal waveform; and

the control section controls the power adjustment section to set a plurality of write light each having a different emission power based on the feature information after the power adjustment section sets the plurality of write light,

the write section records a plurality of record pits in the optical information record medium by applying the plurality of write light;

the feature extraction section optically reproduces a plurality of record states containing the record pits correspondingly to produce a second signal waveform, and extracts the feature information of the record state for each of the record pits based on the second signal waveform; and

the control section determines that power of write light corresponding to information closest to or almost equal to target feature information, of the feature information of the record state for each of the record pits is appropriate write light power, and controls the power adjustment section to adjust the emission power of the write light.

Claim 10 (Currently Amended): An information record method for adjusting power of write light onto an optical information record medium, the information record method comprising the steps of:

applying write light having a specific power or a predetermined power emitted from a light source to record a record pit in the optical information record medium;

optically reproducing a record state containing the record pit to produce a first signal waveform:

extracting feature information of the record state based on the first signal waveform; setting a plurality of write light each having a different emission power based on the feature information.

applying the plurality of write light to record a plurality of record pits in the optical information record medium;

optically reproducing a plurality of record states containing the record pits to produce a second signal waveform;

extracting the feature information of the record state for each of the record pits based on the second signal waveform;

determining that power of write light corresponding to information closest to or almost equal to target feature information, of the feature information of the record state for each of the record pits is appropriate write light power; and

adjusting the power of the write light.

Claim 11 (Currently Almended): An information record medium recording a control information program to be executed in a computer, the control information program comprising: applying write light having a specific power or a predetermined power emitted from a

light source to record a record pit in the an optical information record medium;

optically reproducing a record state containing the record pit to produce a first signal waveform;

extracting feature information of the record state based on the first signal waveform; setting a plurality of write light each having a different emission power based on the feature information,

applying the plurality of write light to record a plurality of record pits in the optical information record medium;

optically reproducing a plurality of record states containing the record pits to produce a second signal waveform;

extracting the feature information of the record state for each of the record pits based on the second signal waveform;

determining that power of write light corresponding to information closest to or almost equal to target feature information, of the feature information of the record state for each of the record pits is appropriate write light power; and

adjusting the power of the write light.
